

Your Local Garden Centre Group Ltd

Our Commitment to making our Centres sustainable.

All of our lighting is low-energy led and we heat our buildings with carbon neutral bio-mass or ultra-efficient heat pump technology and do not use fossil fuels. We have also invested in insulation and this makes our retail buildings comfortable all year round for staff and customers with minimum energy use.

Recycling and Waste

We use industry leading recycling partners to manage maximum recycling of our plastic, cardboard, food and glass waste.

British and Locally Grown Plants

Our aim is to support Local and British based plantsmen and companies so that we can bring you the best quality stock that has not travelled distance to reduce our carbon footprint.

Peat Free Compost

We are committed to always having a range of peat free composts in stock and encourage the use of soil conditioners and improvers that have non-peat based organic content.

Wildlife Friendly Plants

We will always ensure that there is a range of Bee and Insect friendly plants for you to buy. It is essential for us all to protect our flora and fauna as without these our ecosystems will perish.

FSC Timber Products

We work with our suppliers of wooden furniture and accessories to ensure that all timber has been ethically sourced.
